REQUEST FOR PROPOSAL

Market Intelligence, Experience Design & Platform Build for a Student Career-Discovery Venture

Issued by: The Founder (Educator & Venture Lead) **Respondents: 3-member consulting team**

---

1. BACKGROUND — THE FOUNDER

The founder is a career educator with experience across all types of Indian schools, from mainstream to alternative and progressive. She has spent years working closely with teenagers as they face some of the biggest education decisions in their lives. This hands-on experience has given her real insight into how teenagers think, where they struggle, and how the systems around them often let them down. She is not an outside investor following an education-technology trend. Instead, she has seen the same challenges come up again and again for her students and decided to create a solution just for them.

2. THE STARTUP IDEA

She has noticed that students in grades nine to twelve often do not know what they want, and they have to make important choices about streams, subjects, and careers before they are ready. Without good guidance, these students often rely on parents, teachers, friends, or coaching centers. While these sources mean well, their advice can be uninformed, biased, or simply not right for the student, which can lead to decisions based on outside influence instead of what truly fits. This startup aims to solve that problem. It will work directly with students in this age group, guiding them through a series of activities, tests, and evaluations to create a detailed profile of each student's strengths, interests, and preferences. Instead of giving generic advice, the startup will offer thoughtful recommendations for career paths that truly fit each student, based on real evidence rather than pressure or guesswork.

3. OBJECTIVE OF THIS ENGAGEMENT

We invite a three-member team to approach this venture through a full 360° lens and deliver across three sequential phases, culminating in a pitch to the founder.

4. SCOPE OF WORK

- **Phase 1 — Market Intelligence & Opportunity.** Study the market opportunity, competitive landscape, adjacent players, and substitutes, and synthesize the findings into a comprehensive market intelligence and opportunity report for the company.
- **Phase 2 — Experience Design.** Design an experience for the primary customers applying design-thinking principles. This phase carries the widest creative latitude; the intent is to see how the team thinks and solves open-ended problems.
- **Phase 3 — Platform Build.** Bring the design to life by building a working platform that implements the defined process, using Claude or any comparable AI tool of the team's choosing.

5. CADENCE & FINAL PITCH

Progress will be tracked through reviews held twice a week. If the work is well received, the engagement will culminate in a call with the founder, where the team will pitch everything they have studied, designed, and built.

6. WHAT WE ARE LOOKING FOR

A response that demonstrates rigor in analysis, originality in design, and the ability to translate ideas into a functioning product—along with a clear point of view on how each phase connects to the next.

We look forward to your proposal.
